

1. Introduction

Frames in HTML allow you to divide the browser window into multiple sections, where each section can load a separate HTML document.

- **<frameset>**: This tag is used **instead of** the <body> tag. It defines how the window is divided (rows or columns).
 - **<frame>**: This tag defines the specific window (sub-window) within a frameset.
 - **<noframes>**: Used to display content for browsers that do not support frames.
-

2. Syntax & Structure

The basic structure replaces the <body> tag with <frameset>.

```
<html>
<head><title>Frameset Example</title></head>
<frameset rows="50%, 50%">
  <frame src="page1.html">
  <frame src="page2.html">
</frameset>
</html>
```

3. Important Attributes

A. <frameset> Attributes

1. **rows**: Divides the screen horizontally.
 - Values can be in pixels (100), percentage (50%), or relative length (*).
 - *Example*: rows="20%, 80%" (Top 20% header, bottom 80% content).
2. **cols**: Divides the screen vertically.
 - *Example*: cols="30%, *" (Left 30% menu, Right remaining space).
3. **border**: Sets the width of the border between frames (e.g., border="5").

B. <frame> Attributes

1. **src**: The URL or path of the file to show in the frame (Essential).
 2. **name**: Gives the frame a name so links can open inside it (e.g., target="content_frame").
 3. **scrolling**: Controls scrollbars. Values: yes, no, auto.
 4. **noresize**: Prevents the user from dragging the borders to resize frames.
-

4. Example: Standard Webpage Layout

This is a nested frameset example (Top Header + Left Menu + Right Content). This is the standard "exam style" example.

The Code:

```
<!DOCTYPE html>
<html>
<head> <title>My Website Frames</title></head>
```

```
<frameset rows="20%, *">
```

```
<frame src="header.html" name="topFrame" noresize="noresize">
```

```
<frameset cols="25%, 75%">
```

```
<frame src="menu.html" name="menuFrame">
```

```
<frame src="content.html" name="mainFrame">
```

```
</frameset>
```

```
</frameset>
```

```
</html>
```

5. Summary of Logic

1. **Row 1 (20%):** Loads header.html.
 2. **Row 2 (Remaining *):** Instead of a single file, it contains a **nested frameset**.
 - **Col 1 (25%):** Loads menu.html.
 - **Col 2 (75%):** Loads content.html.
- **Note :-** The `<frameset>` and `<frame>` tags are deprecated in modern HTML5.
